⚠ WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

1 Safety Precaution

1.1. General Guidelines

1. IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are important for safety. These parts are marked by

 in the Schematic Diagrams, Circuit Board Layout, Exploded Views and Replacement Parts List. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent X-RADIATION, shock, fire, or other hazards. Do not modify the original design without permission of manufacturer.

2. An Isolation Transformer should always be used during the servicing of AC Adaptor whose chassis is not isolated from the AC power line. Use a transformer of adequate power rating as this protects the technician from accidents resulting in personal injury from electrical shocks. It will also protect AC Adaptor from being damaged by accidental shorting that may occur during servicing.
3. When servicing, observe the original lead dress. If a short circuit is found, replace all parts which have been over-heated or damaged by the short circuit.
4. After servicing, see to it that all the protective devices such as insulation barriers, insulation papers shields are properly installed.
5. After servicing, make the following leakage current checks to prevent the customer from being exposed to shock hazards.

1.2. Leakage Current Cold Check

1. Unplug the AC cord and connect a jumper between the two prongs on the plug.
2. Measure the resistance value, with an ohmmeter, between the jumpered AC plug and each exposed metallic cabinet part on the equipment such as screwheads, connectors, control shafts, etc. When the exposed metallic part has a return path to the chassis, the reading should be between $1\text{ M}\Omega$ and $5.2\text{ M}\Omega$. When the exposed metal does not have a return path to the chassis, the reading must be infinity.

1.3. Leakage Current Hot Check (See Figure 1.)

1. Plug the AC cord directly into the AC outlet. Do not use an isolation transformer for this check.
 2. Connect a $1.5\text{ k}\Omega$, 10 W resistor, in parallel with a $0.15\text{ }\mu\text{F}$ capacitor, between each exposed metallic part on the set and a good earth ground, as shown in Figure 1.
 3. Use an AC voltmeter, with $1\text{ k}\Omega/\text{V}$ or more sensitivity, to measure the potential across the resistor.
 4. Check each exposed metallic part, and measure the voltage at each point.
 5. Reverse the AC plug in the AC outlet and repeat each of the above measurements.
 6. The potential at any point should not exceed 0.75 V RMS .
- A leakage current tester (Simpson Model 229 or equivalent) may be used to make the hot checks, leakage current must not exceed $1/2\text{ mA}$. In case a measurement is outside of the limits specified, there is a possibility of a shock hazard, and the equipment should be repaired and rechecked before it is returned to the customer.

Hot-Check Circuit

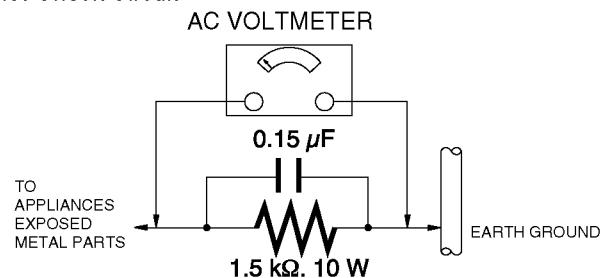

Figure. 1

1.4. How to Discharge the Capacitor on Flash Top PCB

CAUTION:

1. Be sure to discharge the capacitor on FLASH TOP PCB.
2. Be careful of the high voltage circuit on FLASH TOP PCB when servicing.

[Discharging Procedure]

1. Refer to the disassemble procedure and Remove the necessary parts/unit.
2. Put the insulation tube onto the lead part of Resistor (ERG5SJ102:1kΩ /5W).
(an equivalent type of resistor may be used.)
3. Put the resistor between both terminals of capacitor on FLASH TOP PCB for approx. 5 seconds.
4. After discharging confirm that the capacitor voltage is lower than 10V using a voltmeter.

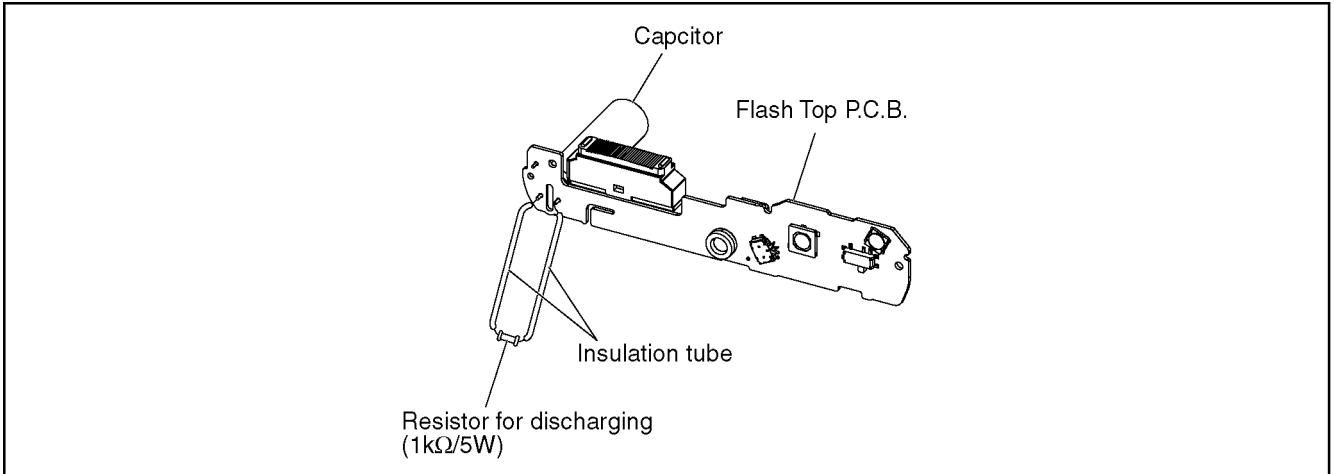

Fig. F1

2 Warning

2.1. Prevention of Electrostatic Discharge (ESD) to Electrostatically Sensitive (ES) Devices

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices.

Examples of typical ES devices are CCD image sensor, IC (integrated circuits) and some field-effect transistors and semiconductor "chip" components.

The following techniques should be used to help reduce the incidence of component damage caused by electrostatic discharge (ESD).

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any ESD on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging ESD wrist strap, which should be removed for potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an antistatic solder removal device. Some solder removal devices not classified as "antistatic (ESD protected)" can generate electrical charge sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

CAUTION :

Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.

8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity (ESD) sufficient to damage an ES device).

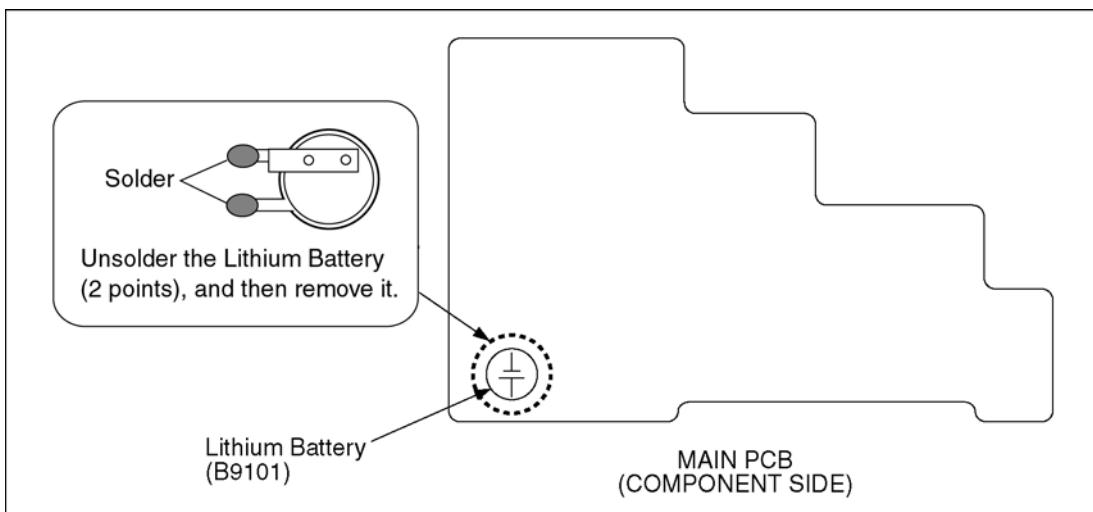

2.2. How to Replace the Lithium Battery

2.2.1. Replacement Procedure

1. Remove the Main PCB. (Refer to Disassembly Procedures.)
2. Unsolder the each soldering point of electric lead terminal for Lithium battery (Ref. No. "B9101" at component side of Main PCB) and remove the Lithium battery together with electric lead terminal. Then replace it into new one.

NOTE:

The Type No. ML614S/F9FE includes electric lead terminals.

NOTE:

This Lithium battery is a critical component.

(Type No.: ML614S/F9FE **Manufactured by Matsushita Battery Industrial Co.,Ltd.**)

It must never be subjected to excessive heat or discharge.

It must therefore only be fitted in requirement designed specifically for its use.

Replacement batteries must be of same type and manufacture.

They must be fitted in the same manner and location as the original battery, with the correct polarity contacts observed.

Do not attempt to re-charge the old battery or re-use it for any other purpose.

It should be disposed of in waste products destined for burial rather than incineration.

(For English)

CAUTION

Danger of explosion if battery is incorrectly replaced.

Replace only with the same or equivalent type recommended by the manufacturer.

Dispose of used batteries according to the manufacturer's instructions.

(For German)

ACHTUNG

Explosionsgefahr bei falschem Anbringen der Batterie. Ersetzen Sie nur mit einem äquivalentem vom Hersteller empfohlenem Typ.

Behandeln Sie gebrauchte Batterien nach den Anweisungen des Herstellers.

(For French)

MISE EN GARDE

Une batterie de remplacement inappropriée peut exploser. Ne remplacez qu'avec une batterie identique ou d'un type recommandé par le fabricant. L'élimination des batteries usées doit être faite conformément aux instructions du manufacturier.

NOTE:

Above caution are also applicable for below batteries which is for DMC-LS80 all series, as well.

1. AA Oxyride batteries
2. AA Alkaline batteries
3. AA Rechargeable Ni-MH (nickel-metal hydride) batteries

3 Service Navigation

3.1. Introduction

This service manual contains technical information, which allow service personnel's to understand and service this model. Please place orders using the parts list and not the drawing reference numbers. If the circuit is changed or modified, the information will be followed by service manual to be controlled with original service manual.

3.2. General Description About Lead Free Solder (PbF)

The lead free solder has been used in the mounting process of all electrical components on the printed circuit boards used for this equipment in considering the globally environmental conservation.

The normal solder is the alloy of tin (Sn) and lead (Pb). On the other hand, the lead free solder is the alloy mainly consists of tin (Sn), silver (Ag) and Copper (Cu), and the melting point of the lead free solder is higher approx.30°C (86°F) more than that of the normal solder.

Distinction of PCB Lead Free Solder being used

The letter of "PbF" is printed either foil side or components side on the PCB using the lead free solder.(See right figure)

PbF

Service caution for repair work using Lead Free Solder (PbF)

- The lead free solder has to be used when repairing the equipment for which the lead free solder is used.
(Definition: The letter of "PbF" is printed on the PCB using the lead free solder.)
- To put lead free solder, it should be well molten and mixed with the original lead free solder.
- Remove the remaining lead free solder on the PCB cleanly for soldering of the new IC.
- Since the melting point of the lead free solder is higher than that of the normal lead solder, it takes the longer time to melt the lead free solder.
- Use the soldering iron (more than 70W) equipped with the temperature control after setting the temperature at 350±30°C (662±86°F).

Recommended Lead Free Solder (Service Parts Route.)

- The following 3 types of lead free solder are available through the service parts route.
RFKZ03D01K-----(0.3mm 100g Reel)
RFKZ06D01K-----(0.6mm 100g Reel)
RFKZ10D01K-----(1.0mm 100g Reel)

Note

* Ingredient: tin (Sn) 96.5%, silver (Ag) 3.0%, Copper (Cu) 0.5%, Cobalt (Co) / Germanium (Ge) 0.1 to 0.3%

3.3. How to Define the Model Suffix (NTSC or PAL model)

There are five kinds of DMC-LS80, regardless of the colours.

- a) DMC-LS80S
- b) DMC-LS80P, LS80PC
- c) DMC-LS80EB/EG/E/GN, LS80EF
- d) DMC-LS80EE
- e) DMC-LS80PL/GC/GK

(DMC-LS80S is exclusively Japan domestic model.)

What is the difference is that the "INITIAL SETTINGS" data which is stored in Flash ROM mounted on Main PCB.

3.3.1. Defining methods:

To define the model suffix to be serviced, refer to the nameplate which is putted on the bottom side of the Unit.

a) DMC-LS80S

DMC-LS80S is exclusively Japan domestic model.

b) DMC-LS80P, LS80PC

The nameplate for these models show the following Safty registration mark.

c) DMC-LS80EB/EG/E/GN/EF

The nameplate for these models show the following Safty registration mark.

d) DMC-LS80EE

The nameplate for these models show the following Safty registration mark.

e) DMC-LS80PL/GC/GK

The nameplate for these models do not show any above Safty registration mark.

NOTE:

After replacing the MAIN PCB, be sure to achieve adjustment.

The adjustment instruction is available at "software download" on the "Support Information from NWBG/VDBG-PAVC" web-site in "TSN system", together with Maintenance software.

3.3.2. INITIAL SETTINGS:

When you replace the Main PCB, be sure to perform the initial settings after achieving the adjustment by ordering the following procedure in accordance with model suffix of the unit.

1. IMPORTANT NOTICE:

Before proceeding Initial settings, be sure to read the following CAUTIONS.

CAUTION 1 (Initial Settings)

DO NOT select "NONE(JAPAN)" or "P" (North America) if need to select "EG/E/PL/GC/GK/EF/EB/EE/GN and PC".

Otherwise, once "NONE(JAPAN)" or "P" (North America) are selected, "EG/E/PL/GC/GK/EF/EB/EE/GN and PC" will not displayed, thus, RE-Settings (changing area) can not be made.

CAUTION 2 (Picture back up from "Built-in Memory")

This unit employs "Built-in Memory" for picture image data recording.(Approx.24MB)
Be sure to make picture data back up (i.e., Copying to SD memory card), before proceeding "INITIAL SETTINGS".

Once "INITIAL SETTINGS" has been carried out, all image data stored at "Built-in Memory" is erased.

2. PROCEDURES:

- Precautions: Proceed the picture back up from the unit (Refer to above "CAUTION 2")
- Preparation. Set the Recording mode to "Normal Picture Mode".

Set the Recording/playback switch to "[Recording mode] (camera mark (UP))".

Turn on the power and then press the [MODE] button.

Select the "NORMAL PICTURE MODE" using "[UP] ▲ / [DOWN] ▼ of Cursor button".

Press [MENU/SET] button, then turn the power off.

- **Step 1. The temporary cancellation of initial setting:**

Set the Recording/playback switch to "[Recording mode] (camera mark (UP))".

While keep pressing [E.ZOOM], [MENU] and "[UP] ▲ of Cursor button" simultaneously, turn the Power on.

- **Step 2. The cancellation of initial setting:**

Set the Recording/playback switch to "[Playback (Down)]".

Press [E.ZOOM], [MENU] and "[UP] ▲ of Cursor button" simultaneously, then turn the Power off.

- **Step 3. Turn the Power on:**

Set the Recording/playback switch to "[Recording mode] (camera mark (UP))", and then turn the Power on.

- **Step 4. Display the INITIAL SETTING:**

While keep pressing [MENU] and "[RIGHT] ► of Cursor button" simultaneously, turn the Power off.

INITIAL SETTINGS 1/3	
NONE(JAPAN)	● DMC-LS80S
P	● DMC-LS80P
EG. E	● DMC-LS80EG/E
PL	● DMC-LS80PL
GD	
SELECT◆ SET▶ END MENU SET	

INITIAL SETTINGS 2/3	
GC. SG	● DMC-LS80GC
GT	
GK	● DMC-LS80GK
EF	● DMC-LS80EF
EB	● DMC-LS80EB
SELECT◆ SET▶ END MENU SET	

INITIAL SETTINGS 3/3	
EE	● DMC-LS80EE
GN	● DMC-LS80GN
PC	● DMC-LS80PC
LB	
SELECT◆ SET▶ END MENU SET	

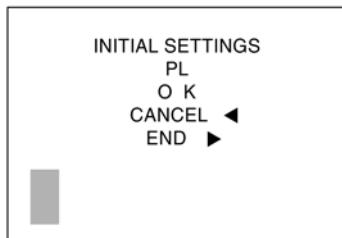

• Step 5. Set the INITIAL SETTING: (Refer to “CAUTION 1”)

[Caution for before settings]

Once "NONE(JAPAN)" (Area for Japan) or "P" (Area for North America) is selected with "INITIAL SETTINGS", other areas will not be displayed even if "INITIAL SETTINGS" menu is displayed again, thus, the area can not be changed.

Select the area carefully.

Select the area with pressing “[UP] ▲ / [DOWN] ▼ of Cursor button”, and then press the “[RIGHT] ► of Cursor button”.

The only set area is displayed, and then press the “[RIGHT] ► of Cursor button” after confirmation.

(The unit is powered off automatically.)

Confirm the display of “PLEASE SET THE CLOCK” in English when the unit is turned on again.

• Step 6. CONFIRMATION:

The display shows “PLEASE SET THE CLOCK” when turn the Power on again.

When the unit is connected to PC with USB cable, it is detected as removable media.

(When the “GK” model suffix is selected, the display shows “PLEASE SET THE CLOCK” in Chinese.)

1) As for your reference Default setting condition is given in the following table.

• Default setting (After “INITIAL SETTINGS”)

	MODEL	VIDEO OUTPUT	LANGUAGE	DATE	REMARKS
a)	DMC-LS80S	NTSC	Japanese	Year/Month/Date	
b)	DMC-LS80P, DMC-LS80PC/PL	NTSC	English	Month/Date/Year	
c)	DMC-LS80EB/EG/E/GC/GN	PAL	English	Date/Month/Year	
d)	DMC-LS80EF	PAL	French	Date/Month/Year	
e)	DMC-LS80EE	PAL	Russian	Date/Month/Year	
f)	DMC-LS80GK	PAL	Chinese (simplified)	Year/Month/Date	

4 Specifications

Digital Camera:	Information for your safety	
Power Source:	DC 3 V	
Power Consumption:	1.5 W (When recording) 0.6 W (When playing back)	
Camera Effective pixels:	8,100,000 pixels	
Image sensor:	1/2.5" CCD	
Total pixels:	8,320,000 pixels Primary color filter	
Lens:	Optical 3 x zoom, f=5.5 to 16.5 mm [35 mm film camera equivalent: 33 to 100 mm] / F2.8 to F5.1	
Digital zoom:	Max. 4 x	
Extended optical zoom:	Max. 4.8 x	
Focus:	Normal / Macro 5-area-focusing / 1-area-focusing (high speed) / 1-area-focusing	
Focus range:	Normal : 50 cm (1.64 feet) to ∞ Macro / Intelligent: 5 cm (0.16 feet) (Wide) / 30 cm (0.98 feet) (Tele) to ∞ Scene mode: settings may be different to those shown above	
Shutter system:	Electronic shutter+Mechanical shutter	
Motion picture recording:	Aspect ratio [4:3]: 640 × 480 pixels (30 frames/second, 10 frames/second) (When a card is used.) / 320 × 240 pixels (30 frames/second, 10 frames/second) Aspect ratio [16:9]: 848 × 480 pixels (30 frames/second, 10 frames/second) (When a card is used.) With audio	
Burst recording		
Burst speed:	Approx. 2.5 pictures/second (NORMAL), Approx. 2 pictures/second (Unlimited)	
Number of recordable pictures:	Max. 7 pictures (Standard), max. 4 pictures (Fine), Depends on the remaining capacity of the built-in memory or the card (Unlimited).	
Hi-speed burst		
Burst speed:	Approx. 5.5 pictures/second	
Picture size:	[2M] (4:3), [2.5M] (3:2), [2M] (16:9)	
ISO sensitivity:	AUTO/ 100 / 200 / 400 / 800 / 1600 [HIGH SENS.] mode: 1600 to 6400	
Shutter speed:	8 seconds to 1/2,000th of a second [STARRY SKY] mode: 15 seconds, 30 seconds, 60 seconds	
White balance:	Auto white balance / Daylight / Cloudy / Shade / Halogen / White set	
Exposure (AE):	Program AE	
Metering mode:	Exposure compensation (1/3 EV Step, -2 EV to +2 EV)	
LCD monitor:	Multiple	
Flash:	TFT LCD 2.5" (Approx. 230,000 dots) (field of view ratio about 100%)	
Microphone:	Flash range: Approx. 30 cm (0.98 feet) to 5.9 m (15.42 feet) (Wide [ISO AUTO] mode) AUTO, AUTO / Red-eye reduction, Forced ON (Forced ON / Red-eye reduction), (Slow sync. / Red-eye reduction), Forced OFF	
Recording media:	Monaural	
Picture size:	Built-in Memory (Approx. 24 MB) / SD Memory Card / SDHC Memory Card/MultiMediaCard (Still pictures only)	
Still picture:	Aspect ratio [4:3]: 3264 × 2448 pixels, 2560 × 1920 pixels, 2048 × 1536 pixels, 1600 × 1200 pixels, 640 × 480 pixels Aspect ratio [3:2]: 3264 × 2176 pixels, 2560 × 1712 pixels, 2048 × 1360 pixels Aspect ratio [16:9]: 3264 × 1840 pixels, 2560 × 1440 pixels, 1920 × 1080 pixels Aspect ratio [4:3]: 640 × 480 pixels (Only when using an SD Memory card / SDHC Memory Card), 320 × 240 pixels Aspect ratio [16:9]: 848 × 480 pixels (Only when using an SD Memory card / SDHC Memory Card)	
Motion picture:	Fine / Standard	
Quality:		
Recording file format	JPEG (Design rule for Camera File system, based on Exif 2.21 standard), DPOF corresponding	
Still Picture:	"QuickTime Motion JPEG" (motion pictures with audio)	
Motion pictures:		
Interface		
Digital:	USB 2.0 (Full Speed)	
Analog video / audio:	NTSC / PAL Composite (Switched by menu), Audio line output (monaural)	
Terminal		
DIGITAL/AV OUT:	Dedicated jack (8 pin)	
DC IN:	Type1 jack (Only when using DC coupler)	
Dimensions:	3.77" (W) × 2.44" (H) × 1.23" (D) (95.7 mm (W) × 62.0 mm (H) × 31.2 mm (D)) (excluding the projection part)	
Mass (Weight):	Approx. 0.28 lb/129 g (excluding Memory Card and battery) Approx. 0.39 lb/177 g (with Memory Card and battery)	
Operating Temperature:	0 °C to 40 °C (32 °F to 104 °F)	
Operating Humidity:	10 % to 80 %	

5 Service Fixture & Tools

5.1. When Replacing the Main PCB

After replacing the MAIN PCB, be sure to achieve adjustment.

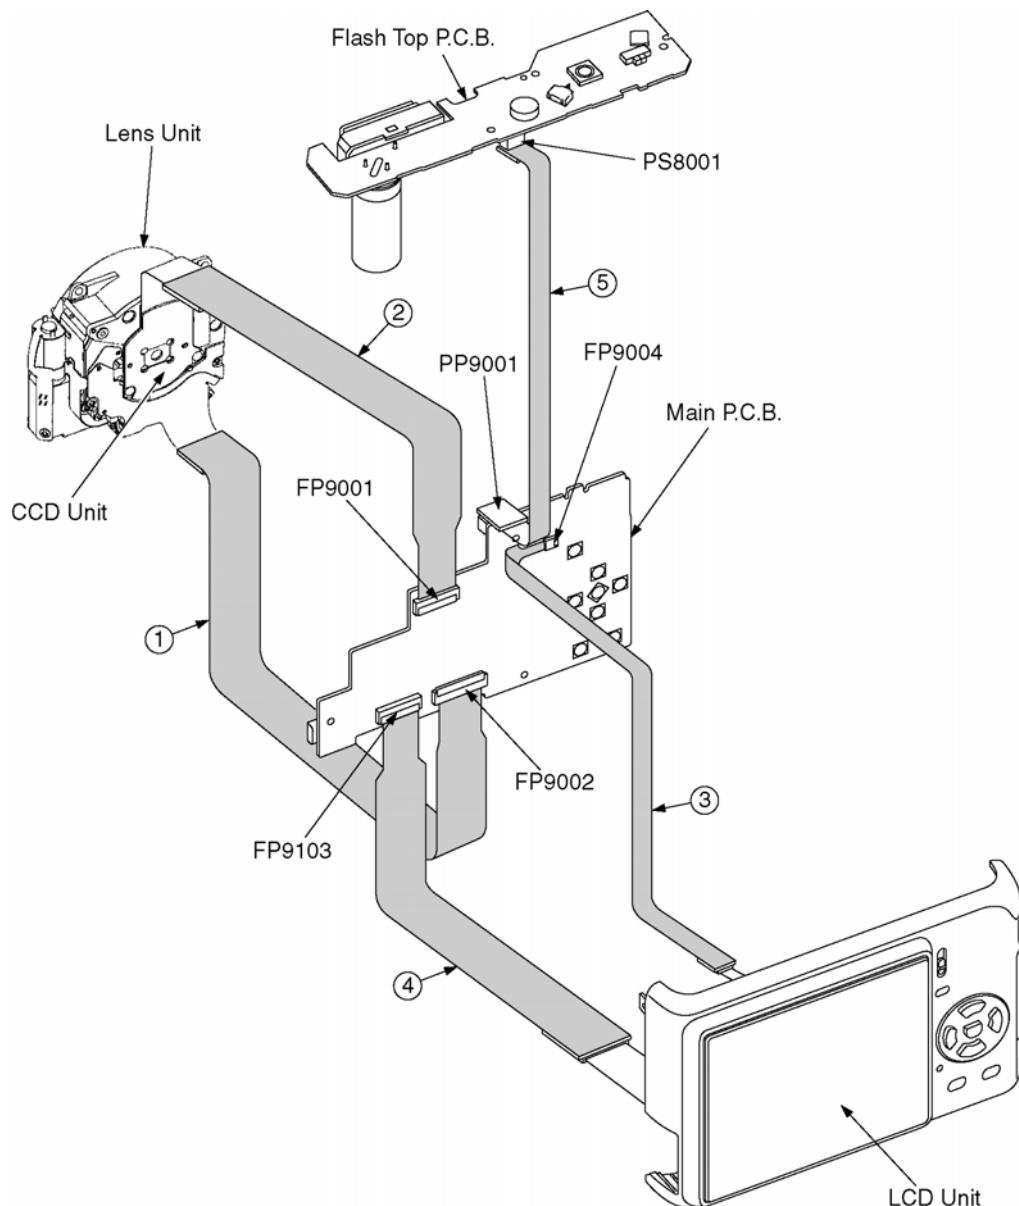

The adjustment instruction is available at "software download" on the "Support Information from NWBG/VDBG-PAVC" web-site in "TSN system", together with Maintenance software.

5.2. Service Position

This Service Position is used for checking and replacing parts. Use the following Extension cables for servicing.

Table S1 Extension Cable List

No.	Parts No.	Connection	Form
1	VFK1951	FP9002 (MAIN) - LENS UNIT	39PIN 0.3 FFC
2	VFK1951	FP9001 (MAIN) - CCD UNIT	39PIN 0.3 FFC
3	VFK1974	FP9004 (MAIN) - LCD UNIT	4PIN 0.3 FFC
4	RFKZ0354	FP9103 (MAIN) - LCD UNIT	37PIN 0.5 FFC
5	VFK1906	PP9001 (MAIN) - PS8001 (FLASH TOP)	20PIN B to B

CAUTION-1. (When servicing FLASH TOP PCB)

1. Be sure to discharge the capacitor on FLASH TOP PCB.
Refer to "HOW TO DISCHARGE THE CAPACITOR ON FLASH TOP PCB".
The capacitor voltage is not lowered soon even if the AC Cord is unplugged or the battery is removed.
2. Be careful of the high voltage circuit on FLASH TOP PCB.
3. DO NOT allow other parts to touch the high voltage circuit on FLASH TOP PCB.

6 Maintenace

6.1. Cleaning Lens and LCD Panel

Do not touch the surface of lens and LCD Panel with your hand.

When cleaning the lens, use air-Blower to blow off the dust.

When cleaning the LCD Panel, dampen the lens cleaning paper with lens cleaner, and the gently wipe the their surface.

Note:

The Lens Cleaning KIT ; VFK1900BK (Only supplied as 10 set/Box) is available as Service Aid.

S1. About Indication of The Schematic Diagram

S1.1. Important Safety Notice

COMPONENTS IDENTIFIED WITH THE MARK HAVE THE SPECIAL CHARACTERISTICS FOR SAFETY. WHEN REPLACING ANY OF THESE COMPONENTS USE ONLY THE SAME TYPE.

- 1.Although reference number of the parts is indicated on the P.C.B. drawing and/or schematic diagrams, it is NOT mounted on the P.C.B. when it is displayed with "\$" mark.
- 2.It is only the "Test Round" and no terminal (Pin) is available on the P.C.B. when the TP (Test Point) indicated as "●" mark.
- 3.The voltage being indicated on the schematic diagram is measured in "Standard-Playback" mode when there is no specify mode is mentioned.
- 4.Although the voltage and waveform available on here is measured with standard frame, it may be differ from actual measurement due to modification of circuit and so on.
- 5.The voltage being indicated here may be include observational-error (deviation) due to internal-resistance and/or reactance of equipment. Therefore, handle the value indicated on here as reference.
- 6.Use the parts number indicated on the Replacement Parts List .
- 7.Indication on Schematic diagrams:

S2. Voltage Chart

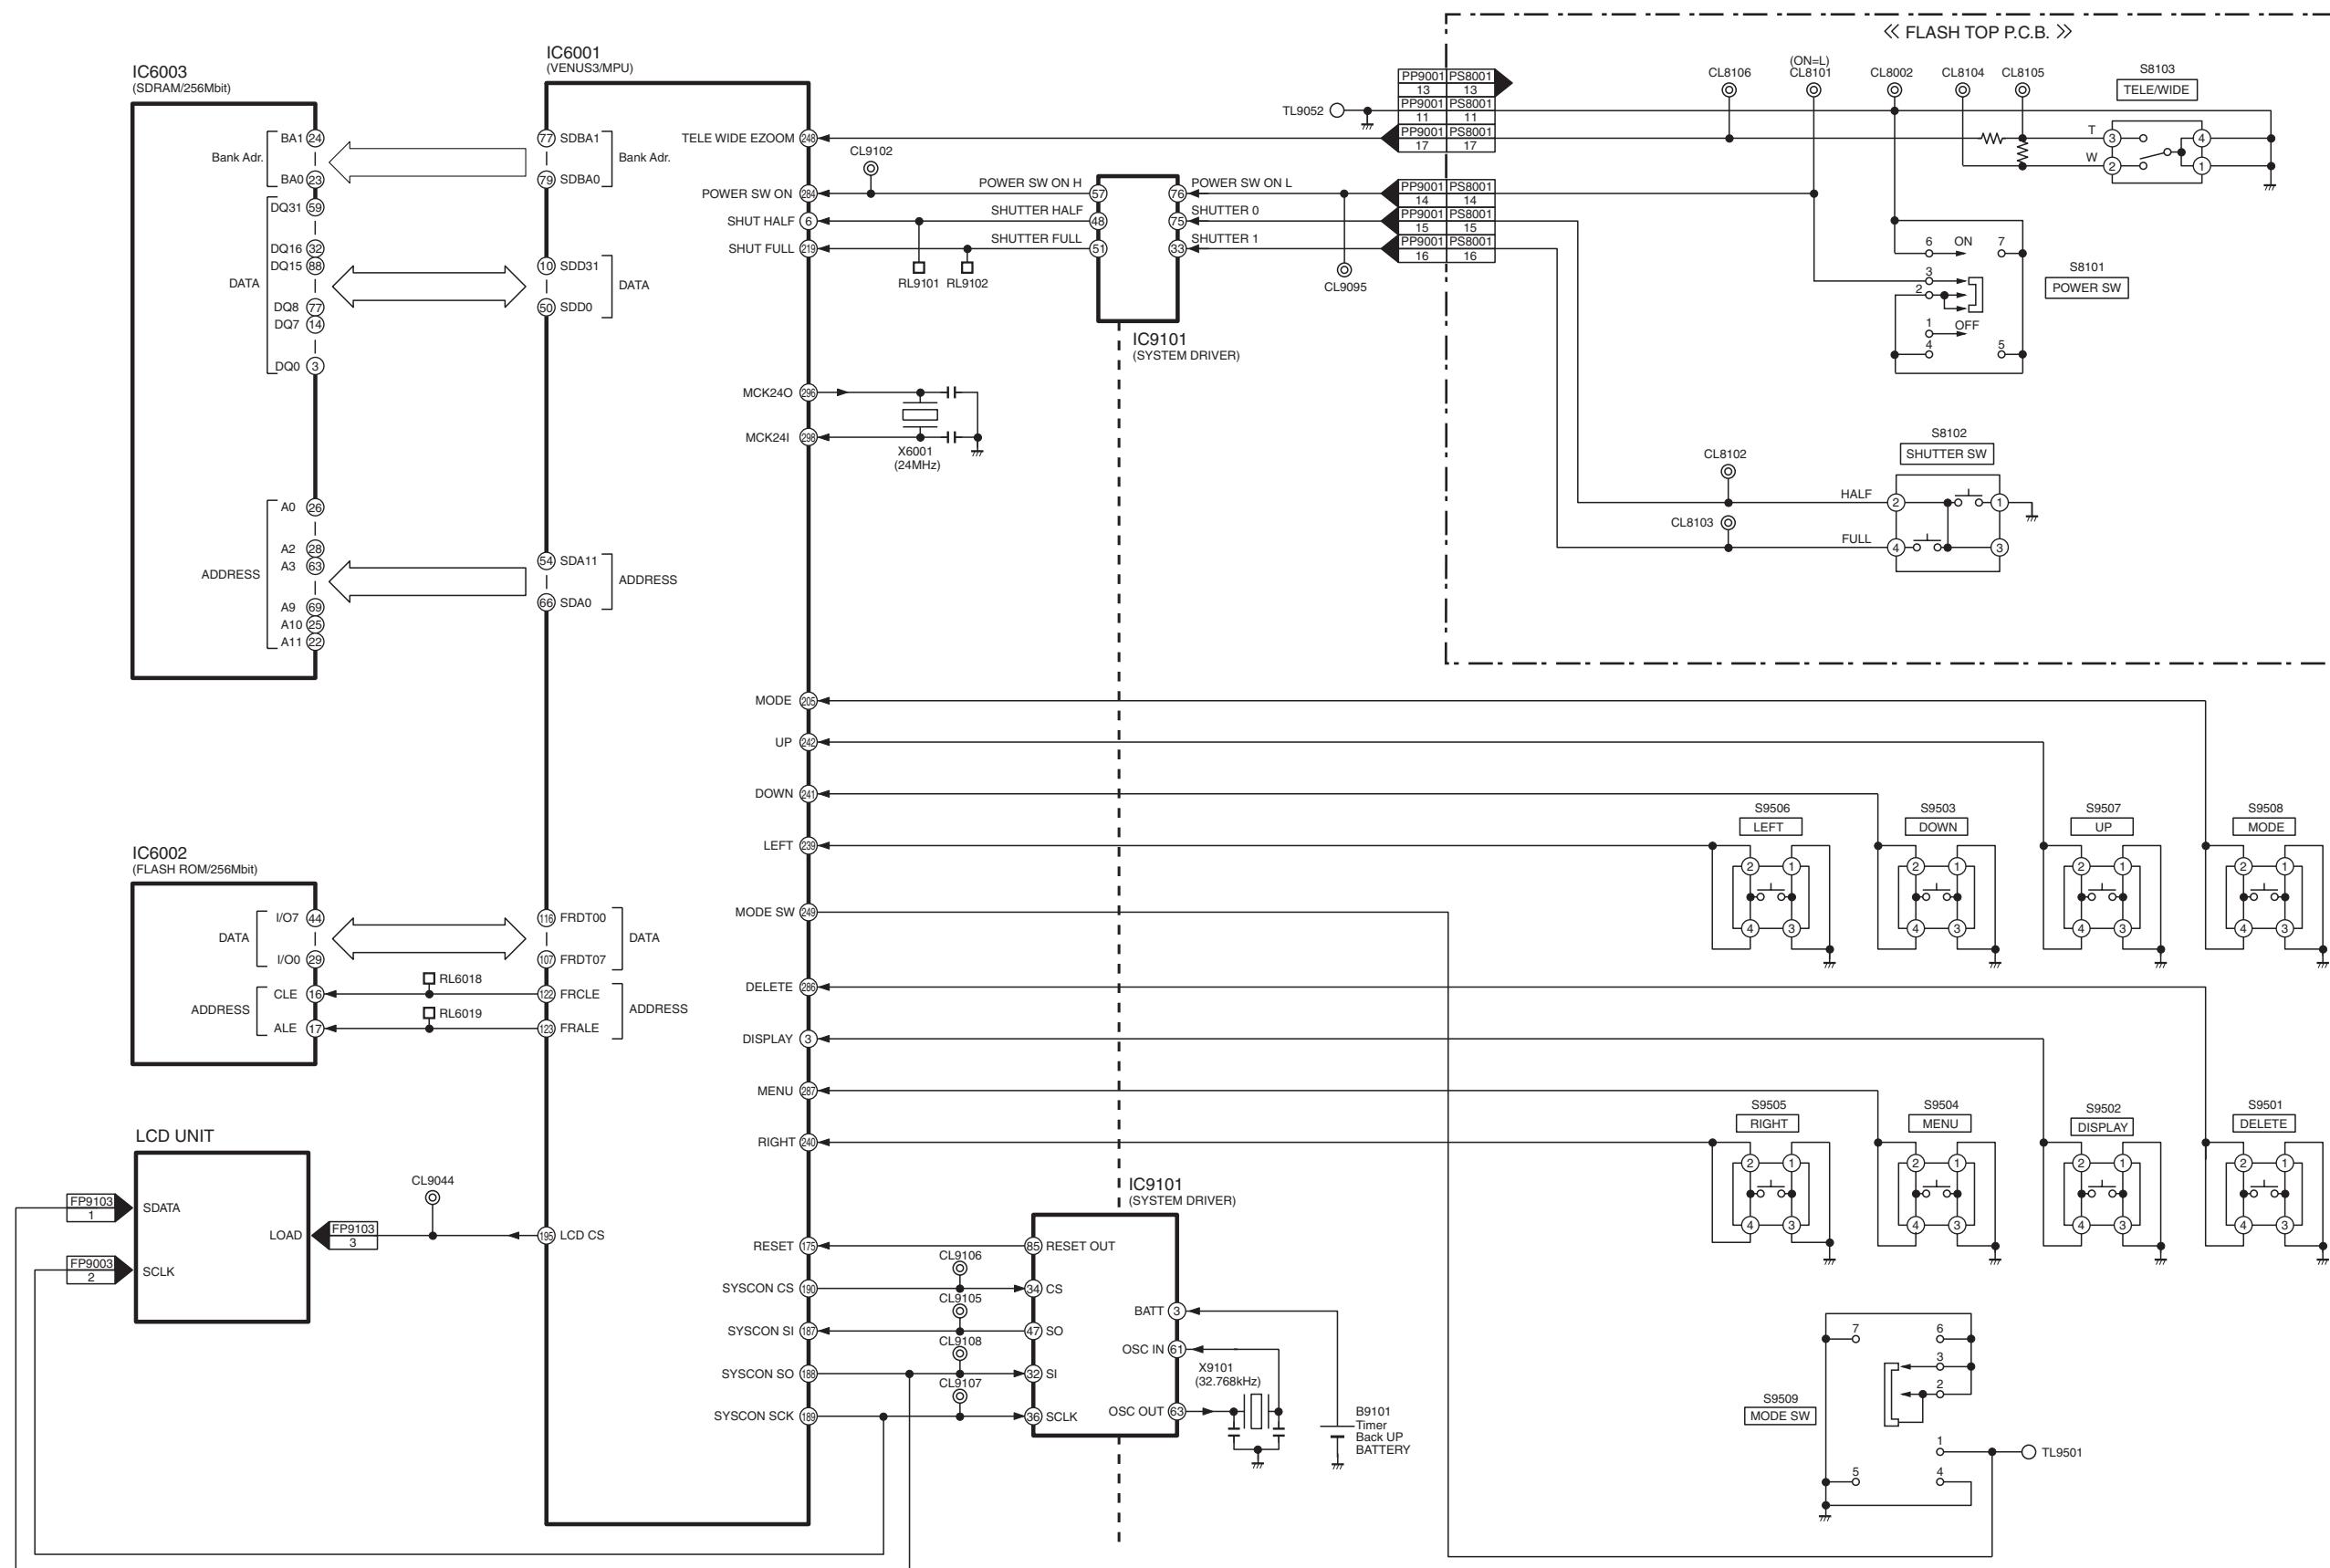

Note) Indicated voltage values are the standard values for the unit measured by the DC electronic circuit tester (high-impedance) with the chassis taken as standard.
Therefore, there may exist some errors in the voltage values, depending on the internal impedance of the DC circuit tester.

S6. Replacement Parts List

- Note:
- 1.* Be sure to make your orders of replacement parts according to this list.
 2. **IMPORTANT SAFETY NOTICE**
Components identified with the mark  have the special characteristics for safety.
When replacing any of these components, use only the same type.
 3. Unless otherwise specified,
All resistors are in OHMS, K=1,000 OHMS. All capacitors are in MICRO-FARADS (uf), P=uuF.
 4. The marking (RTL) indicates the retention time is limited for this item. After the discontinuation of this assembly in production, it will no longer be available.
 5. Supply of CD-ROM, in accordance with license protection, is allowable as replacement parts only for customers who accidentally damaged or lost their own.

E.S.D. standards for Electrostatically Sensitive Devices, refer to PREVENTION OF ELECTROSTATIC DISCHARGE (ESD) TO ELECTROSTATICALLY SENSITIVE (ES) DEVICES section.

Definition of Parts supplier:

1. Parts marked with [MBI] in the remarks column are supplied from Matsushita Battery Industrial Co., Ltd.
2. Parts marked with [PAVC-CSG] in the remarks column are supplied from PAVC COMPANY CS Group (PAVC-CSG).
Others are supplied from PAVCSG (ASPC).
